Gold Processing Intertank Screens

Johnson Screen offers a variety of wire shapes and configurations which allow our engineers to design the most efficient screen for Gold Processing industry

In the gold and silver mining market, Johnson Screens' stainless steel Vee-Wire (Wedge Wire) intertank screens are used to recover gold and silver in the slurry separation process.

Vee-Wire intertank screens are made from 304 or 316 stainless steel and are designed to withstand the most demanding conditions.

All screens are designed to each customer specification for open area, flow and loads.

Johnson Screens offers a wide variety of products for screening, particle separation and classifying in Gold Processing plants.

- CIP/CIL Cylindrical Interstage Screens
- Custom Screen Panels
- Elution Column Screens
- Sieve Bends - Carbon Fine Screens
- Drain and Septa Screens
